

# APH Methodology Webinar

## ‘How Open Science practices can improve research quality’

By Lex Bouter (VU & AUMC), Lieuwe Kool (AUMC) & Tamarinde Haven (Charité, Berlin)

**Date:** 18 May 2021

**Time:** 16:00 - 17:30

**Location:** Online

### Focus of the Webinar:

Researchers increasingly have to decide on the open science practices they want to follow. The issues vary from pre-registering a protocol of your study or upload preprints of your papers, to publishing your findings, codes and data sets open access. But why would we do this, and how can it help us to improve the quality of our research? And how does all these new tricks work? Which journals or repositories should we choose? Why should we get an ORCID? And what is a creative commons license? Were to pre-register our research? Or should we submit a registered report?

In this webinar we will reflect on (1) How open science practices can improve research quality (2) How open access publication and open data should preferably be realized, and (3) How open methods can be realized in practice
